

Positive Resource Estimate

Probe Mines recently announced a new Resource Estimate for the Borden Gold Deposit, which provides an updated estimation of the number of ounces of gold contained in the deposit. In all aspects, the Borden deposit has shown significant improvement in both gold ounces and /or gold grades from previous estimates.

 Chapleau, ON.

Probe Mines Launches Community Newsletter

Welcome to the inaugural edition of the Borden Reporter, our community newsletter keeping you up to date on the local activities at the Borden Gold Project. The project continues to advance and we would like to thank everyone for their support. Probe is committed to insuring this remains a local project with local involvement.

Noise baffles surrounding a drill rig and stationary noise monitoring equipment

In May, Probe kicked-off its 2014 land-drilling program. This is an important step in advancing the project. With people gearing up for another summer on and around the lake, Probe is working hard to keep our exploration activities running as quietly as possible. We are pleased to say that over the last 2 years we've implemented a number of noise control measures, many of which were specially developed for our project:

- 12 foot high noise baffles and industrial sound dampening mats have been installed around each drill.
- Drills have been equipped with rubber stoppers to reduce clanging when we change drill rods.
- Bulldozer back-up warning sirens have been modified to a lower pitched sound that doesn't carry as far.
- Drills will be moved inland progressively to minimize noise transfer as the busy summer season approaches.
- Regular meetings are held between the drill foreman and his employees from Major Drilling to reinforce the importance of working quietly. In addition, we'll be monitoring noise levels near cottages and campgrounds in proximity to the site. This allows us to identify noise issues and take measures to address them.

Watch for upcoming editions, stay safe and have a great summer!
